

Sale of a family house made of expanded clay blocks - built-up area 102 m2

Karviná

price with a broker

As a sales representative of a construction company, we offer you timeless construction from durable, low-energy expanded concrete prefabricated blocks in the Moravian-Silesian Region or the Olomouc Region on our own land. We are ready to help you with the selection and purchase of suitable land and to actively search for it for you. The house is two-storey and no basement 4 + kk ideal for narrow building plots. The ground floor has 3 bedrooms, 1 bathroom with shower, toilet and bath, utility room for heating and boiler, living room connected to the terrace, kitchen with pantry and dining room. Why choose this type of building construction? The price always comes first. It is lower compared to other types of masonry structures, because the width of the perimeter expanded clay blocks is only 15 cm and 10 cm at the inner walls. This saves on the size of the base plate and internal plaster - the boards are so smooth that they can be painted immediately. Thermal comfort - expanded clay boards accumulate heat and maintain a constant temperature in the house and at the same time have excellent thermal insulation properties. Ecological-health - pressed expanded clay board is a natural material with a safety certificate. Safety - it is a completely non-flammable and frost-resistant material completely resistant to living organisms and water. Moisture - pressed expanded clay has high absorption capacity of about 21% - is resistant to fungi and mold. Base slab - is a floating solid concrete slab poured on a sufficient layer of aggregate - the masonry does not crack, does not move and does not absorb moisture - a very long total life of the building up to 200 years. This type of foundation slab is ideal for mined areas, moist soaked or sandy and clayey soils. The house also contains - plastic windows, plastic rain gutters, wooden truss (not truss), concrete roofing or anodized sheet metal, plasterboard ceiling, roof insulation, insulation of perimeter masonry, exterior plaster with aryl coating, lightning conductor built into the insulation, wooden ceilings plated on the side and outdoor sheet metal window sills with surface anodizing. Quality ceramic interior paving and tiling. Interior wood paneled doors. Plastic entrance doors - fireproof. Plastic terrace doors - balcony opening or sliding with recessed sill. If for some reason this project does not suit you - it does not matter. We will help you design the floor plan of your dream house free of charge and hand it over to our designers. They will design your individual project for you. If you enter into a contract with us, the price of the project will be deducted from the total price of the house, so you will also have the project for free. Construction period from 3 months of signing the contract with the assumption of a valid building permit. If you are interested, we also process a building permit for you. Contact the offer broker for more information.
